

SAFETY of FUNDS

GreenWaveX strives to provide you with a trading environment that is totally safe and secure.

In order to safeguard all data systems, GreenWaveX uses a mix of advanced technological and physical protection measures and tools, which include but are not limited to:

- Secure Sockets Layer (SSL) software, as well as refined firewalls which are used to keep data protected during transmission
- Transmission of all data between server and machines through SSL encryption
- Level 1 PCI certified international payment service providers at the helm of all financial transactions
- SSAE 16 certified datacenters as the official location of all trading servers
- All communication threads between GreenWaveX clients and data servers are encrypted.

Advanced Safety Infrastructure

The GreenWaveX R&D team adheres to strict safety protocols and guidelines to guarantee the integrity of its platform and site.
